

They Aren't Rodents.

Their Teeth Never Stop Growing

Young **Rabbits** Are Called Kittens. ...

Rabbits Have Their Own Anger Language

Rabbits sleep with their eyes open

Rabbits live in burrows, often called a warren.

The male is called a buck and the female a doe.

Rabbits generally measure 40 – 45 centimetres in length and have ears that measure 8.5 centimetres long.

- They have compact bodies with long, powerful hind legs.
- A Rabbits fur is generally long and soft and is grey/brown in colour and they have white underparts and a short tail. Their long ears of rabbits are most likely an adaptation for detecting predators.
- Rabbits are herbivores who feed by grazing on grass, and leafy weeds, however, they will also eat all vegetable matter and gnaw tree bark in winter months.
- They Eat Their Own Poop. Rabbits re-swallow up to 80% of their faeces to use their food more efficiently in a process known as 'refection'.
